

Control your dry waste

- Designed for demanding marine and offshore conditions
- Highly efficient, clean and silent equipment; no hydraulics or pneumatics
- No deterioration, long lifetime and low maintenance cost
- Easy to install, user-friendly and safe to use for the crew
- DNV Maritime Assessment/Verification Reports
- Electrical system compliant with IEC 60092 standard

Example of dry waste products, see more on the following page.

Our systems for dry shipboard solid waste include marine compactors, baling presses, shredders and crushers. These can, alone or in combination, reduce the volume of ship generated waste by up to 90% depending on fraction. They also includes chute systems, storage systems for dangerous waste as well as central vacuum cleaning systems for a complete, efficient and safe waste handling.

Waste handling stations for sorting different waste fractions should be strategically located. From these stations, waste is recommended be transported to an indoor garbage handling room for processing. The garbage handling room should preferably be located in the area where most of the waste is being generated, i.e. close to the galley, accommodation, shopping or production area.

The complete system will assist the crew in collecting, sorting, treating and storing the waste onboard and help them to comply with regulations worldwide. The treated waste fractions can be transported onshore for recycling or possibly energy recovery.

Below some of our products for dry waste handling are displayed. See separate product sheets for details.

See recommended dry waste products per vessel type at our homepage: www.usonmarine.com

About Uson Marine

Uson Marine has been a leading provider of sustainable waste management systems for the maritime and offshore industry since 1983. We help our customers reduce the environmental impact of their operations and thus improve their environmental profile. This, in turn, contributes to securing and increasing their long-term revenue.

We have the solutions, know-how and experience to help our customers minimize the cost and labour of waste handling onboard their rig or vessel, and ensure that they comply with the relevant rules and regulations. We support our customers at every stage, including: surveys, design, installation, commissioning and training of the crew.

Uson Marine is certified for ISO 9001 & 14001 by DNV and certified in Achilles Joint Qualification System (www.achilles.com)
